## UNDERSTAND

7. Communicate Precisely Create a flow chart to show the process to determine whether a given data set represents a function that is linear, quadratic, exponential, or none of these.
8. Generalize Calculate the 2nd differences for data in each table. Use a graphing calculator to find the quadratic regression for each data set. Make a conjecture about the relationship between the a values in the quadratic models and the $2 n d$ differences of the data.

| $x$ | $y$ |
| :---: | :---: |
| 0 | 0 |
| 1 | 3 |
| 2 | 12 |
| 3 | 27 |
| 4 | 48 |

| $x$ | $y$ |
| :---: | :---: |
| 1 | 0.5 |
| 2 | 2 |
| 3 | 4.5 |
| 4 | 8 |
| 5 | 12.5 |

| $x$ | $y$ |
| :---: | :---: |
| 0 | 4 |
| 1 | 16 |
| 2 | 36 |
| 3 | 64 |
| 4 | 100 |

| $x$ | $\boldsymbol{y}$ |
| :---: | :---: |
| 3 | 58.5 |
| 5 | 162.5 |
| 7 | 318.5 |
| 9 | 526.5 |
| 11 | 786.5 |

9. Error Analysis What is the error in the student's reasoning below? Describe how to correct the statement.

The data can be modeled with a linear function because the first differences are constant.

| $x$ | $y$ |
| :---: | :---: |
| -3 | -8 |
| -1 | -2 |
| 0 | 4 |
| 1 | 10 |
| 3 | 16 |

10. Higher Order Thinking A savings account has a balance of $\$ 1$. Savings Plan A will add $\$ 1,000$ to an account each month, and Plan B will double the amount each month.
a. Which plan is better in the short run? For how long? Explain.
b. Which plan is better in the long run? Explain.

## PRACTICE

Determine whether a linear, quadratic, or exponential function is the best model for the data in each table. SEe example 1
11.

| $x$ | $y$ |
| :---: | :---: |
| 0 | -9 |
| 1 | -7 |
| 2 | -1 |
| 3 | 17 |
| 4 | 71 |

12. 

| $x$ | $y$ |
| ---: | ---: |
| 0 | 1 |
| 1 | 2 |
| 2 | 7 |
| 3 | 16 |
| 4 | 29 |

13. 

| $x$ | $y$ |
| :---: | :---: |
| 0 | 56 |
| 1 | 57 |
| 2 | 50 |
| 3 | 35 |
| 4 | 12 |

14. 

| $x$ | $y$ |
| :---: | ---: |
| 0 | -6 |
| 1 | -3 |
| 2 | 0 |
| 3 | 3 |
| 4 | 6 |

Do the data suggest a linear, quadratic, or an exponential function? Use regression to find a model for each data set. see example 2
15.

16.

| $x$ | 6 | 7 | 8 | 9 | 10 |
| ---: | ---: | ---: | ---: | ---: | ---: |
| $\boldsymbol{y}$ | -19 | -12 | -7 | -4 | -3 |

17. Use the functions shown. See example 3

a. Evaluate each function for $x=6, x=8$ and $x=12$.
b. When will function $h$ exceed function $f$ and function $g$ ?

## APPLY

18. Model With Mathematics The data in the table show the population of a city for the past five years. A new water plant will be built when the population exceeds 1 million. Will the city need a new water plant in the next ten years? Use a function model to justify your answer.

| Year | 2016 | 2017 | 2018 | 2019 | 2020 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Population | 794,000 | 803,000 | 814,000 | 822,000 | 830,000 |

19. Construct Arguments The graphic shows costs for rectangular lots of different widths. Each lot is twice as long as it is wide.

To coat a parking lot 300 m long and 150 m wide, a developer budgeted $\$ 20,220$, or three times the cost of a lot 50 m wide. Will the budget be sufficient? Justify your answers using a function model.
20. Construct Arguments Carmen is considering two plans to pay off a $\$ 10,000$ loan. The tables show the amount remaining on the loan after $x$ years.

| Plan A |  | Plan B |  |
| :---: | :---: | :---: | :---: |
| Year | Amount Remaining | Year | Amount Remaining |
| 0 | 10,000 | 0 | 10,000 |
| 1 | 9,000 | 1 | 9,500 |
| 2 | 8,100 | 2 | 9,000 |
| 3 | 7,290 | 3 | 8,500 |
| 4 | 6,561 | 4 | 8,000 |

Which plan should Carmen use to pay off the loan as soon as possible? Justify your answer using a function model.

## ASSESSMENT PRACTICE

21. Function $f$ has constant second differences. Which of the following are true? Select all that apply.
(A) The graph of $f$ is a parabola.
(B) The graph of $f$ is a straight line.
(C) The ratios of the $y$-values increase as $x$ increases.
(D) The function $f$ is an exponential function.
(E) The function $f$ has constant first differences.
22. SAT/ACT At what point will $f(x)=3^{x}$ exceed $g(x)=2 x+5$ and $h(x)=x^{2}+4$ ?
(A) $(1,7)$
(B) $(1.8,7.3)$
(C) $(2,9)$
(D) $(2.4,9.8)$
23. Performance Task Ella wrote three different computer apps to analyze some data. The tables show the time in milliseconds $y$ for each app to analyze data as a function of the number of data items $x$.

| App A |  | App B |  | App C |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $x$ | $y$ | $x$ | $y$ | $x$ | $y$ |
| 4 | 11 | 4 | 4,042 | 4 | 4,400 |
| 5 | 173 | 5 | 5,040 | 5 | 5,375 |
| 6 | 659 | 6 | 6,038 | 6 | 6,550 |
| 7 | 2,117 | 7 | 7,036 | 7 | 7,925 |
| 8 | 6,491 | 8 | 8,034 | 8 | 9,500 |

Part A Use regression on a graphing calculator to find a function that models each data set. Explain your choice of model.

Part B Make a conjecture about which app will require the most time as the number of data items gets very large. How could you support your conjecture?
