

## 5-1 Additional Practice

### *n*th Roots, Radicals, and Rational Exponents

Find the specified roots of each number.

1. real fourth roots of 625

2. real cube roots of 125

Explain what the fractional exponent means, then evaluate.

3.  $144^{\frac{1}{2}}$

4.  $121^{\frac{3}{2}}$

What are the values of each expression? Round to the nearest hundredth.

5.  $-(64^{\frac{5}{6}})$

6.  $\sqrt[4]{(4.6)^3}$

Rewrite using a fractional exponent.

7.  $\sqrt[3]{-27m^3n^6}$

8.  $\sqrt[4]{625x^8y^{28}}$

9.  $\sqrt[6]{49^2}$

Solve the equations.

10.  $7x^3 = 189$

11.  $199,927 = 7x^4$

12. One cube has an edge length 5 cm shorter than the edge length of the second cube. The volume of the smaller cube is  $216 \text{ cm}^3$ . What is the volume of the larger cube?

13. Describe and correct the error a student made in writing this expression in radical form.

$$x^{\frac{4}{5}} = (x^4)^{\frac{1}{5}}$$

$$(x^4)^{\frac{1}{5}} = \sqrt[4]{x^5}$$

14. A water-walking ball has a volume of approximately  $904.32 \text{ ft}^3$ . What is the radius of the ball?

$$\left(V = \frac{4}{3}\pi r^3\right)$$

15. Jeanne's bank account earns interest annually. The equation below shows her starting balance of \$400 and her balance at the end of five years, \$535.29. At what rate  $r$  did Jeanne earn interest?

$$535.29 = 400(1 + r)^5$$
